TAKING CARE OF REGULATORY REQUIREMENTS  
MANAGING COMPLIANCE IN THE CLOUD

## Geography Risks

### FULLY TAILORED

You have options to use reputable data sets, combine reputable data sets into one risk score or develop a tailored risk configuration that may be unique to your business.

### MULTIPLE OPTIONS

Your geography risk dashboard provides you a dropdown lists of the most relevant data sources. There is no limitation to what type of data you can include. Results are instant.

### LOCAL AND INTERNATIONAL

Data sets can be either an international perspective, data across your local jurisdiction or a combination of both. There are no limitations.

### EASY INTERPRETATION

Our colour coding and country file note ensures there is no complex or bulky data to interpret. You get sufficient information to interpret risks in a fast and expedient manner.

### FILTERS

Use the filters to select country data and view results on a global map or drill down to a specific country or select a risk level to display all countries in that category.

### BORDER RISK

This methodology to examining country risks incorporates an easy method to identify border risks. Border risks are important for interpreting real risks.
